KOGANTI SASANK

Agentic AI Engineer and Senior Data Scientist

India | Remote preferred | +91 6377803564 | k.sasank16@gmail.com | github.com/kogantisasank831-ux

PROFESSIONAL SUMMARY

Senior Data Scientist with 4+ years of experience building production Generative AI, multi-agent, retrieval-augmented generation and machine-learning systems. Hands-on experience with Python, FastAPI, LangGraph, REST APIs, containerized deployment, CI/CD, LLM evaluation and self-hosted models. Leads solutions from requirements and architecture through implementation, production monitoring and stakeholder delivery.

CORE SKILLS

Agentic AI and LLMs: LangGraph, multi-agent orchestration, tool access, agentic RAG, prompt engineering, LLM-as-judge, NeMo Guardrails
Models and retrieval: Gemma, Llama 3.1, Gemini, Ollama, vLLM, BM25, hybrid retrieval, Elasticsearch vector search, QLoRA
Backend engineering: Python, FastAPI, Flask, SQL, REST APIs, asynchronous processing, PostgreSQL, MariaDB, Elasticsearch
Platform and MLOps: Docker, Kubernetes, KEDA, RabbitMQ, Celery, Redis, Jenkins CI/CD, MLflow, Langfuse, GCP, pytest, Bandit

PROFESSIONAL EXPERIENCE

Senior Data Scientist | TCG Digital, Remote, India | Jul 2025 - Present

- Architected an enterprise procurement intelligence platform with a supervisor and five specialized agents for RFQ tracking, bid validation, post-PO fulfilment, compliance and user queries; integrated SAP Ariba, email and database workflows in a role-based interface.
- Designed LangGraph-based agent orchestration with SQL-first routing, hybrid RAG, small-model intent classification, structured inputs and outputs, restricted tool access, response evaluation and NeMo Guardrails.
- Scaled asynchronous processing for up to 2,000 concurrent users using RabbitMQ, Celery, Redis, Kubernetes and KEDA, with FastAPI and REST interfaces for system integration.
- Implemented Langfuse tracing, retrieval and answer-quality confidence scoring, pytest checks, Bandit scans and CI/CD quality gates for observable and repeatable releases.
- Led a catalyst-research engine that screened 50,000+ patents using BM25 and LLM scoring, fine-tuned Gemma with QLoRA, reached 65% relevance and deployed the workflow on GCP.
- Built a private proposal-generation system using self-hosted Llama 3.1 served through vLLM and section-specific few-shot examples for confidential technical documents.

Data Scientist Consultant | TCG Digital, Remote, India | Jul 2022 - Jun 2025

- Created a reusable CI/CD framework for data-science APIs with linting, Bandit security scans, pytest unit tests, golden-dataset model checks and Jenkins-based FastAPI and Flask deployment.
- Delivered XGBoost models for drilling-fluid rheology and thickening-time prediction across 1M+ records and 50+ locations, comparing global, local and grouped-location strategies.
- Built reusable AutoML and optimization components for industrial analytics, with feature engineering, model selection, validation, reporting and production integration.

SELECTED PROJECT

Agentic Recruitment Platform | LangGraph, Python, Gemma 2B, Ollama, React

- Architected and developed the backend for a deployed recruitment product with six agents for JD creation, resume screening, interview-question generation, traceability, audit and workflow automation.
- Self-hosted a quantized Gemma 2B model through Ollama and built the agent workflows in LangGraph; repository: github.com/kogantisasank831-ux/rms-app-optimized.

LEADERSHIP AND RECOGNITION

Leads the Agentic Innovation Guild, co-leads DevOps and Optimization guilds, mentors 5-6 colleagues, manages two team members and has interviewed 10-12 GenAI engineering candidates.

EDUCATION

M.Sc. Mathematics | BITS Pilani | 2018 - 2022
